TI - Paint composition - comprises ethylene glycol di:glycidyl ether and/or polyethylene glycol di:glycidyl ether, colloidal silica dispersed or stabilised in polar organic solvent or water and vinyl]-based polymer

AB - J10324842 A paint composition consists of: (a) 100 wt. pts. of ethylene glycol diglycidyl ether and/or polyethylene glycol diglycidyl ether having a wt. average mol. wt. of up to 2,000; (b) 20-250 wt. pts. (by silica content conversion) of colloidal silica dispersed/stabilised in a polar organic solvent or in water in an acid area; and (c) 1-50 wt. pts. of a vinyl-based polymer having a glass transition temp. of up to 60 (pref. 30) deg. C.

- USE - The paint is partic. suitable for outdoor use.

- ADVANTAGE - The compsn. provides a coat film of excellent hydrophilic, antifouling, substrate-adhesive and weather resisting properties.

TI - COATING COMPOSITION

AB - PROBLEM TO BE SOLVED: To obtain a composition which can give a coating film excellent in initial hydrophilicity, stainproofness, adhesion to substrates and weathering resistance by including ethylene glycol diglycidyl ether, colloidal silica stably dispersed in water in an acidic region and a vinyl polymer having a specified glass transition point in specified amounts.

- SOLUTION: This composition comprises 100 pts.wt. ethylene glycol diglycidyl ether and/or polyethylene glycol diglycidyl ether having a weight - average molecular weight of 2,000 or below, 20-250 pts.wt. colloidal silica desirably having a mean particle diameter of 5-200 nm and stably dispersed in water in an acidic region of, say, a pH of 2-4 or in a polar organic solvent (e.g. isopropanol) and 1-50 pts.wt. vinyl polymer (e.g. 2-2-acryloyloxyethylsuccinic acid polymer) having a glass transition point of 60 deg.C or below, desirably 30 deg.C or below.
